Playing card storage box

Short instructable how to make a BB storage box. This model box is easy to get to (me) and very portable. You will need to soak the box in the water to remove the label. This is done in 2 minutes. Pan it with plaid and fill it with BBs! You can hang it on a belt or something like that, and quickly fill your BB-gun. I use it for bb-gun. To begin with, Cut the cardstock to the necessary measurements to the box card. Base card - 25.5cm x 15cm Hit 6cm, 12cm, 18cm and 24cm along the longest side. At the end there would be a flap of 1.5 cm. Score 7cm on the shorter side. Cut through the score to the 7 cm mark and discard the flange of 1.5 cm from the top. From the lower part of the 1.5cm flange, cut slightly off at an angle. I missed taking a pic in this step, so here's a pic from the internet that shows how it looks! Add patterned papers of your choice to flanges that appear on the front. I've stuck another cs on my back so it's stand straight. As a result, it's packed with features and features, and is only available about everywhere you're going to have it. It's the business packages that make the Box stand out from the crowd, but it does cater to consumers as well. The emphasis is on syncing files to a special folder, not backing up all systems and hard drives, and here's what you need to know about it. Read more: Tresorit You can sign in to the Box here Box features Box takes Dropbox access to cloud storage by creating a specific folder on your Windows or macOS computer, and then keeping all of its contents in sync with the cloud (and other devices where you have installed the Box). If you are looking for a solution that will back up your hard drive, OS and settings and everything, then that's not it – the strengths of the Box are located elsewhere. Like Dropbox, Box does a very neat job of integrating yourself with File Explorer on Windows or Finder on macOS. The Box folder appears next to other main folders in the system, and you can choose to have all files downloaded for offline access, or to keep them online and transfer them when needed (this is handy if you want to maximize free space on a local drive). Sharing files and folders is easy and easy, whether you need to work with other people or just create a link that can be distributed to who needs it. Box integrates very well with Office 365, G Suite, Adobe Creative Cloud, and other software packs, and it's really the end of the product's business, where it's really surprising. With this in mind, the command functions are good: control access to files and folders, see who cooperates on what, checking the use of files and data throughout the country, and so on. If you're a big business that needs to manage cloud storage data in a complex way, Box is one of the best options; everyone else, it's not that convincing. (Image credit: Future) Box interface Across all its different apps, the Box interface tends to stay basic and minimal, but it's not always negative – it's definitely polished and easy to use, even if we'd like to see a few more features and features to show, rather than hidden behind menus. Software slickness extends to mobile apps for Android and iOS too, so you can easily get to your files from anywhere. When it comes to Windows and macOS, Box really feels like part of the operating system, and we can't give it much more praise for it. On the downside, there's no way to limit bandwidth to use if you have a lot of files to transfer. We find the synchronization process quickly and responsively though – about as good as we would expect given our Internet connection. On the web everything is slick and easy to get around. For example, you can easily make the most recent file changes and create a list of favorite locations in the Box folders, which you can access with a single click. We also appreciate the function to detect some files and folders to automatically delete on a certain date (although you can access it only if you are one of the charge packs). The box also does a great job related to third-party apps and plug-ins, mixing into the background and feeling like a native feature rather than an add-on. A lot of scenarios don't really box the interface as one that could be a plus or minus against the service, depending on your point of view. Overall, though, in the years that Box has had to fine-tune its software offerings out in the show. (Image credit: Future) Box Security Security is something that Box takes very seriously indeed – there's AES 256-bit encryption as standard, and if you need full end-to-end encryption (so even the Box can get your files in a crash), it's available with an add-on. We are pleased to see the two-factor authentication included here, which makes it difficult for anyone to break into your account, even if they have your username and password. All file transfers, logins and even Box application installations are tracked and logged in, and if you add the full Admin console, you get even more auditing and control options. If a file or folder can be accessed, you can receive information by e-mail so that when someone says they are reading your review, you know they are less than true. With full compliance and regulatory tools on offer as well, it all adds up to a very safe and comprehensive service indeed. Box pricing Box definitely has a lot of paid-per-plan to choose from, and that includes a free level – provided you can with 10GB cloud storage and file size limit of 250MB. Pay for a Personal Pro plan that is \$10/£8 per month and which goes up to 100GB cloud storage and a maximum file limit of 5GB. It's not particularly appealing if you consider how much storage the likes of Apple, Microsoft, Google and Dropbox are giving up. Business plans are \$7/£4

per user per month for Starter (100GB of storage), \$20/£12 per user per month for Business (unlimited storage), \$33/£20 per user per month for Business Plus (unlimited storage), and \$47/£28 per month for Enterprise Enterprise (unlimited storage). These deals are much better value (you can save more if you pay each year), and 14-day free trials are available in all of them. (Image credit: Future) Box JudgmentBox very much seems to be focused on the business market, even if it offers a couple of plans for consumers too – it's stacked with collaboration, data compliance and automation, and makes a lot of API available if you need something exclusive. If you pay for one of the more expensive plans, with unlimited storage, it is an attractive overall package. For consumers who have only a little money to spend, that money is probably better spent elsewhere – Box's apps aren't as user friendly as those offered by its competitors, and it can be expensive depending on what you need. It's a great option for cloud storage and syncing, but it's not a great option for anyone.
